PROFESSIONAL SUMMARY

Senior Quality Test Developer with 7+ years at Lightspeed Commerce Inc owning scalable test automation for high-volume commerce platforms. Specialist in Python (pytest + Playwright) for REST and GraphQL API testing, contract/schema validation, and CI/CD quality gates via GitHub Actions and Docker. Built AI-augmented diagnostics and scheduled failure-trend analysis into the delivery pipeline to accelerate root-cause analysis and distinguish infra failures from product regressions. Collaborative partner to backend, DevOps, and product teams focused on shift-left quality and developer experience.

TECHNICAL SKILLS

Python • pytest • Playwright • REST APIs • GraphQL • JSON Schema / Pydantic • Docker • GitHub Actions • CI/CD • SQL • DNS/SSL • AI-assisted Diagnostics & Reporting

KEY ACCOMPLISHMENTS

- Architected Python framework (pytest + Playwright) at Lightspeed testing REST and GraphQL APIs on every commit with built-in schema validation to catch breaking changes pre-production
- Embedded quality gates into developer workflows with GitHub Actions + Docker containerized execution, reducing manual regression and increasing release confidence
- Built AI-driven in-pipeline diagnostics that auto-generate detailed failure reports and distinguish environment/infrastructure failures from product regressions
- Implemented scheduled AI analysis of failure reports to surface recurring patterns, reporting trends to engineering to drive systemic stability fixes
- Designed maintainable, extensible test architectures from the ground up enabling cross-functional scaling of coverage

PROFESSIONAL EXPERIENCE

Senior Quality Test Developer — Lightspeed Commerce Inc | April 2019 – July 2026

- Architected and maintained Python-based framework (pytest + Playwright) for functional testing of REST and GraphQL APIs
- Implemented contract/schema validation to detect breaking API changes before production
- Embedded quality gates into CI/CD via GitHub Actions, Docker, and containerized execution on every commit
- Partnered with backend, DevOps, and product to make quality a shared, automated responsibility
- Leveraged AI to detect local environment issues and generate detailed CI failure diagnostics for faster root-cause analysis
- Built scheduled AI workflow to aggregate and analyze test failures, identifying systemic patterns for engineering leadership

Web Support Specialist — Jonas Software | March 2017 – April 2019

- Served as client liaison troubleshooting email marketing, list/segment, delivery, and scheduling issues; improved customer experience through proactive relationship building
- Ran SQL and resolved client-server to web-server integration issues, DNS conflicts, and SSL certificate renewals/installations

NTSD Knowledge Management Specialist — Rogers Communications | June 2011 – July 2015

- Selected as 1 of 4 to create Rogers' unified knowledge platform (NOVA/Rogers.com), including first cross-functional content template and migration from eHelp, IQ, and Yahoo systems

- Created high-traffic support content including Rogers SpeedCheck portal (40.8% of Internet Support traffic), reducing repeat calls

Technical Support Consultant — Rogers Communications | 2011 – 2015

- Ranked 10th of 258 consultants; achieved 101.25% of Customer Experience and Financial targets while coaching underperformers and resolving escalated provisioning, device, and network issues

EDUCATION

- B.A. Honours, Communication Studies and Humanities — York University, 2010
- Web Design & Production — Humber College, 2016
- Javascript and AngularJS — Seneca College, 2017
- PHP: Databases, CMS and Framework — Seneca College, 2017
